

# Subverting US Energy Policies & Promoting Communism

Although there has been a lot of press coverage about Russian interference in our political process, they are actually attacking us in a much more effective way, with very little attention being paid to it.

An indisputable fact is that our society (our health, our economy, our national security, etc.) is 100% dependent on **plentiful, reliable, affordable** energy. (If there is any question about this, simply turn off the power to any US city. Chaos and lawlessness will ensue shortly.)

There is significant evidence that our country's enemies (esp. Russia and China) are purposefully subverting our energy sector in a variety of ways. Of course they are being clandestine about this, in hopes that few citizens will notice. One of their most effective tactics is for them to support US organizations (and individuals) whose energy agenda is in sync with their bigger agenda: **to promote Communism.**

For example, carefully consider these key energy questions. *Who is it that wants:*

- 1) US nuclear energy facilities to close down?
- 2) the costs of fossil fuels to go up (e.g. with a carbon tax)?
- 3) US fossil fuel reserves to stay in the ground (onshore and offshore)?
- 4) a high percentage of the US electric grid to be based on unreliable sources?
- 5) the US to waste a trillion± dollars on unreliable electricity?
- 6) to promote wind energy even at the expense of our national security?

If you answered: "the Sierra Club and their allies," you'd be right. However the correct answer is *also* our Communist opponents: **Russia and China.**

To most people it is a startling realization to see that when it comes to US energy policy, there is an almost *identical agenda* between the leadership of some NGOs, and countries who are enemies of Democracy. (Although almost none of this is in the mainstream press, here is a [good article](#) about this situation.)

Consider the following sample lines of evidence:

- #1- A 2018 amazing [Report](#) from the House Science & Technology Committee about this collusion. [Note this earlier detailed [letter](#) to the White House from the same committee.]
- #2- Here is a 2018 expose: [The Connection Between Russia and Two Green Groups Fighting US Fracking.](#)
- #3- This 2018 [news report](#) explains about a Congressional effort to require leaders of certain environmental organizations **to register as foreign agents!** It says:

“U.S. environmental activists who are working to halt the production and use of fossil fuels could be required to register as foreign agents if Congress gets serious about enforcing an existing law... An international campaign known as “Keep It in the Ground” has been pushing an anti-fossil fuel agenda **that advances Russia’s geopolitical interests at the expense of the U.S. and America’s allies**. The campaign claims support from [more than 400 organizations](#) across the globe, with a sizable percentage operating inside the U.S. The campaign is opposed not just to the extraction of fossil fuels, but to any fossil fuel-related project including pipelines, rail transportation, refineries, and energy exploration. These groups include Greenpeace, the Sierra Club, 350.org, etc.”

On that topic, here is a new three-minute [video](#) that brings up some interesting points about the Russian collusion with environmental organizations.

- #4- The evidence about collusion is not new news, but information that the national media has (for some reason) not been interested in pursuing and publicizing. Consider this [report](#) last year. [Here’s another 2017 similar [report](#).] Read [Green Tyranny: Exposing the Totalitarian Roots of the Climate Industrial Complex](#).
  - #5- Read these 2015 analyses: “[From Russia With Love](#),” and a report about [Russian funding of Green Groups](#). Here is a more recent [commentary](#).
  - #6- From 2014 a [similar report](#) discusses collusion regarding fracking. “[The Chain of Environmental Command](#)” is a related expose published that year by the *United States Senate Committee on Environment and Public Works*.
  - #7- In 1981 President Ronald Reagan warned about the political and economic threat to the West from Russia’s expanding energy ambitions. See this [article](#).
  - #8- Natalie Grant was an [expert](#) in Soviet propaganda. In 1998, she wrote “[Gorbachev and Global Enviro-Communism](#)” – which is about the Marxist (i.e. Communist) roots of the Global Warming issue, which in-turn spawned the renewable energy craze.
  - #9- The motherlode of tell-tale indicators is found in the 1963 Congressional Record: [45 Declared Communist Goals](#) (from Leon Skousen’s 1958 [book](#)).
  - #10- What’s *really* going on? IMO the movie *Agenda: Grinding America Down* gives the answer: **this is all about sabotaging the country leading the free world**. Please watch this [5 minute trailer](#) that succinctly explains the Communist plan and how it is being effectively implemented in the US... Then please watch the [5 minute trailer](#) for the followup film: *Agenda 2: Masters of Deceit*. On Target!
-

[Fossil fuel exports](#) account for around 16% of Russian GDP, 52% of government revenue and 70% of Russian exports. So it makes good sense that Russian propaganda efforts would be focussed on protecting their fragile, energy-dependent economy.

Similarly, the US is the biggest threat to China's political and economic aspirations, so it is logical that China would also be happy to see our economy and national security undermined. A very effective way to meet the agendas of both of these countries would be for the US to have a frivolous, counter-productive **national energy policy**.

Right now "All of the Above" is *exactly* that. Energy nonsense is playing out in several US energy theaters (wind, solar, nuclear, etc.). A good example is US offshore drilling. Since North Carolina is expected to have the largest amount of gas and oil reserves, it has become ground zero for fossil fuel opposition. Environmentalists are aggressively opposing any and all offshore fossil fuel exploration (e.g. [here](#), [here](#) and [here](#)).

Those on one side of this issue want US fossil fuels to stay in the ground, so that our costs will go up, and that we will be forced to rely on *expensive* and *unreliable* sources of electricity (like wind energy). **This will harm our economy and national security.**

The other, pro-American side, wants us to get *more energy independence*, to *expand our economy* by having lower-cost, reliable electricity, and to be able to give our *European allies an alternative to Russian natural gas*.

You would think that anyone concerned about purported collusion between Russia and President Trump, would be **extremely** disturbed about documented proof that the Russians are *purposefully* trying to undermine our economy and national security by supporting the environmental movement's six-point energy agenda (above).

-----  
BTW, the industrial wind energy matter is a proxy fight over these same issues.

A solid understanding of **who** the coalition is, and **what** their agenda is, makes it crystal clear why those people dislike President Trump. Any leader promoting "Make America Great Again" is an arch-enemy to the forces that want the US to regress to an agrarian age (e.g. with our economy crippled by a high dependence on antiquated, unreliable, expensive electrical energy sources like windmills, that unrelentingly spit out an unpredictable and uncontrollable output).

Oh, and if that isn't bad enough, wind energy ("the gift that keeps on taking") also inexorably divides many communities, pitting neighbor against neighbor. **Who benefits from divisiveness in our country?**

In a nutshell there is strong evidence that ultimately the renewable energy, climate change, and education system clashes we are engaged in, are really about **Communism vs Freedom**.

*Get educated to avoid being a victim, keeping your eye on the ball, and defending your rights...*
