Are Conservatives Winning or Losing?

A factual response to that query will determine the best strategy for Conservatives to take today (e.g. active <u>vs</u> passive, aggressive <u>vs</u> laid-back, offensive <u>vs</u> defensive, etc.).

To accurately answer that profoundly important question, we need to **step back** — *way* back — to see what is transpiring. (Note: part of the having the correct perspective is not to confuse skirmish or battle victories, with the results of the overall War.)

When we do step back sufficiently, it is clear that our opponents are well along in the process of undermining the pillars of our current, successful society. Specifically they are purposefully doing all of the following (and more):*

- 1 Creating divisiveness by pitting our own citizens against each other.
- **2 -** Eroding the Judeo-Christian principles that America was founded on.
- **3 -** Corroding our democratic form of government.
- 4 Diluting our academic system (to produce propagandized lemmings).
- **5 -** Sabotaging genuine Science (as it is a barrier to their agendas).
- **6 -** Subverting our economic system (Capitalism). (An effective and unexpected part of this strategy is to deliberately undermine our Electric Grid, a largely unrecognized foundation of our economy and national security.)

It may be that their most powerful tactic for pulling off their political agenda is to sow **discord** — *so that we fight among ourselves*. In this vile effort they are pitting: men <u>vs</u> women, whites <u>vs</u> minorities, hard workers <u>vs</u> entitlement advocates, wealthy <u>vs</u> not-so-much, citizens <u>vs</u> immigrants, real science <u>vs</u> political science, young <u>vs</u> old, traditional religions <u>vs</u> secular religion, democracy <u>vs</u> socialism, etc.

Americans are always open to a fair fight, but what's jarring to our values is that in all of these campaigns, our adversaries have no apparent standards regarding truth, fairness, rights, freedoms, etc. — yet they speciously claim the moral high ground!

This is death by a thousand stings... *No society can withstand such comprehensive, coordinated, corrosive assaults...* Once one fully understands the nature of these attacks, it should be very clear that we are in the biggest war **ever experienced in history**.

Ultimately we are in a fight between two radically different world views.

The downsides of not *immediately* and *effectively* countering these sophisticated anti-American incursions are accurately spelled out in the two *Agenda* films (watch their two short trailers : <u>Agenda</u>: <u>Grinding America Down</u> and <u>Agenda 2: Masters of Deceit</u>).

Lastly, carefully study this <u>brief overview</u> of what the Russians and Chinese are currently doing to us — with the eager cooperation of unsuspecting (?) internal allies (socialists, environmentalists, etc.). *How successful have they been in this effort? Very!*

As a professional scientist I'm not an alarmist, nor a person inclined to conspiracy theories. I deal with and carefully process empirical evidence.

There is massive evidence that we are losing — Big Time. That does not mean that we have lost, but rather that we are well on the way to defeat. The road to recovery starts with a full acknowledgment of the reality of our current situation — and then a well thought out Plan-Of-Action to effectively counter the assaults we are experiencing.

- * The evidence for each of these is overwhelming and in plain view. My field, Science, is representative. *EVERY aspect of Science is under an insidious coordinated assault!* Even a casual observer should be able to see the profound consequences of:
 - a) a major effort (e.g. via <u>PNS</u>) to remove Science as a gatekeeper for major societal issues (e.g. climate change),
 - b) the widespread, purposeful corruption of the peer-review process,
 - c) scientists (who are supposed to be professionally committed to objective, factual analysis) becoming promoters of undeclared political agendas (e.g. here),
 - **d)** responsible scientists (*who provide evidence that what's politically correct may be wrong*) being <u>publicly attacked</u>, and/or <u>losing their jobs</u>,
 - e) in high schools soft sciences (e.g. ecology) have become politically propagandized,
 - f) Universities are infusing Science education with political considerations such as <u>cultural relativism</u>, <u>social justice</u> and <u>gender equality</u>,
 - **g)** respected major scientific organizations reverting to <u>polls</u> to advocate positions (as <u>vs</u> empirical evidence),
 - **h)** conversely not a single large scientific organization has gone on record to oppose scientifically false solutions to major matters like climate change (*e.g. that there is zero scientific proof that wind energy saves any consequential CO2*),
 - i) the irreproducibility of scientific studies becoming epidemic,
 - j) etc., etc.

There is not a single aspect of what is going on in Science where we are winning.
